Economic and Market Commentary:

Market intervention should subside under the new SEC leadership.

April 1, 2025

The growth of liquidity products since the Federal Reserve first hiked rates in 2022 has been something to behold. Total US money market assets under management (AUM) topped \$7 trillion for the first time in March and those of global money funds have reached record highs, according to the Investment Company Institute (ICI). Similarly, AUM of many non-money fund (rule 2a-7) products types, such as investment pools, to our knowledge, have risen. But we do not think this growth is substantially due to the recent up, then down again, trajectory of the stock market. The argument that investors are placing cash in liquidity products to weather the storm is belied by the nature of the inflows. We believe they are at a growth rate consistent with the extensive migration to money funds seen over the last several quarters. We can't pinpoint from where those assets came. But the steady nature of the inflows supports the hypothesis that people are fed up with low interest rates of other products rather than hiding from the stock market correction.

He said what, now? It's hard to believe Fed Chair Jerome Powell uttered the term "transitory" at the March policy-setting meeting. We thought that radioactive word was long buried after he repeatedly used it to describe pandemic-related inflation in 2021. His point was that the potential impacts of the Trump administration's whipsaw approach to tariffs might be inflationary in the short term but not in the long term, as they might lead to better productivity.

Definition of Weighted Average Maturity (1) & (2)

(1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instruction to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.
(2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

The maximum management fee authorized for the TexSTAR Cash Reserve Fund is 12 basis points. This fee may be waved in full or in part in the discretion of the TexSTAR co-administrators at any time as provided for in the TexSTAR Information Statement.

ECONOMIC COMMENTARY

Market review

In March, uncertainty was the prevailing theme in financial markets, which significantly influenced the U.S. economic outlook. While hard data indicated a moderation in growth towards a balanced expansion, supported by a robust labor market and a recovering global manufacturing sector, the recent escalation in U.S. tariff policies introduced new complexities. The upcoming April 2nd 'Liberation Day' announcement of reciprocal tariffs added to the uncertainty, raising questions about the sustainability of growth in the goods sector, which may be temporarily boosted by front-loading. As these rapidly changing policies unfold, sentiment indicators are becoming increasingly important, as they provide insights into the current economic climate that hard data may not yet reflect. Economic data in March presented a divergence between hard and soft data. On the hard data front, the economy appeared stable, with the third revision of the Q4 GDP showing a solid 2.4% annualized growth rate, and labor market figures indicating healthy job growth and full employment. The February Jobs report was decent, with nonfarm payrolls increasing by 151,000, bringing the 3-month moving average to a still healthy 200,000. Wage growth, after a previous acceleration, eased to 0.3% month-over-month (m/m), resulting in a 4.0% year-over-year increase (y/y). The household survey showed a slight uptick in the unemployment rate to 4.1%, despite a dip in labor force participation. The February CPI report came in slightly below expectations a 0.2% m/m increase in headline inflation, bringing the y/y to 2.8%. Core CPI rose by 0.2% m/m and 3.1% y/y, marking the slowest annual rise since 2021. Despite this moderation, details indicated declining consumer demand, with recreation commodities and airline fares dropping 0.7% and 4.0% m/m, respectively. (continued page 4)
